

# COMMUNICATING YOUR SCIENCE PART 1: YOU

Data After Dark  
January 2016

# The science cycle

Slide from Gully Burns

# How is science traditionally communicated?

=> In some ways, it hasn't changed in 350 years

On average, timeframe from  
submission to publication is

**9 months**

# Translational Research

How long does it take to bring a basic science discovery to a marketable product? .....

**15 years**

# Thinking Beyond the traditional manuscript

How can you  
manage your  
scholarly  
footprint?

You leave bread crumbs wherever you go

<https://aelefton.wordpress.com/2015/05/22/a-trail-of-breadcrumbs/>

How many of  
you use social  
media?

A survey conducted in 2009 by CareerBuilder reported how companies use social media to screen their employees

**45%**

reported they used social sites to screen their hires

**29%**

**26%**

**11%**

**7%**

Positive

**18%**

of employees found content on social sites that influenced them to hire the candidate

Negative

**35%**

of employees found content on social sites that influenced them to **NOT** hire the candidate

# Things to avoid posting online

---

## 1 Digital dirt

Self-incriminating photos, party pictures

## 3 Big mouth

Posting negative comments about your employer/coworkers

## 5 Positively negative

Keeping everything negative

## Terrible troll

2

Trolling the internet and posting inappropriate comments on multiple sites

## Copious contacts and comments

4

Adding sketchy people/strangers to your contacts, who post inappropriate comments

# Your data will get used

## Twitter data may help shed light on sleep disorders

Researchers generate a 'digital phenotype' of Twitter users with sleep problems

#cantsleep #teamnosleep

Google

Open a twitter  
account and follow  
leaders in your field

Tweet at conferences, tweet about  
papers you read, etc.

[Winter in northeastern North America: a critical period for ecological processes](#)

JL Campbell, MJ Mitchell, PM Groffman... - Frontiers in Ecology ..., 2005 - Eco Soc America

Ecological research during winter has historically been a low priority in northeastern North America, an oversight that stems from the commonly accepted notion that there is little biological activity when temperatures drop below freezing. However, recent research has ...

[Can fuel-reduction treatments really increase forest carbon storage in the western US by reducing future fire emissions?](#)

JL Campbell, ME Harmon... - Frontiers in Ecology and ..., 2011 - Eco Soc America

It has been suggested that thinning trees and other fuel-reduction practices aimed at reducing the probability of high-severity forest fire are consistent with efforts to keep carbon (C) sequestered in terrestrial pools, and that such practices should therefore be rewarded ...

BIOGRAPHICAL SKETCH			
Provide the following information for the key personnel and other significant contributors. Follow this format for each person. <b>DO NOT EXCEED FOUR PAGES.</b>			
NAME Melissa Anne Haendel		POSITION TITLE Assistant Professor, Oregon Health and Science University	
eRA COMMONS USER NAME MHAENDEL			
EDUCATION/TRAINING <i>(Begin with baccalaureate or other initial professional education, such as</i>			
INSTITUTION AND LOCATION	DEGREE <i>(if applicable)</i>	YEAR(s)	FIELD OF STUDY
Reed College, Portland, Oregon	B.A.	1991	Chemistry
University of Wisconsin, Madison, Wisconsin	Ph.D.	1999	Neuroscience
University of Oregon, Eugene, Oregon	Postdoctoral	2002	Neuroscience
Oregon State University, Corvallis, Oregon	Postdoctoral	2004	Environmental Health and Toxicology

#### A. Personal Statement

My personal career goal is to further the collaboration and connection between the basic science research performed on model organisms and that performed in the clinic. I was originally a basic sciences researcher, utilizing chicken, mice and zebrafish in my research, and these connections were seemingly something to be taken on faith most of the time. My training includes ontology development, bioinformatics, and molecular biomedical research, which are specific areas of expertise that are key for this application. In my graduate work, I gained a broad background of anatomy, histology, and neuroscience, and was doing molecular biology in model organisms when bioinformatics was just becoming commonly computable. In my post-doctoral work, I utilized the zebrafish to examine the role of nuclear hormone receptors during neural development. I also worked on the effects of biocides on early development, and found this project interesting from the perspective of relating to work being done by the EPA and regulation of these compounds. As a scientific curator at the Zebrafish Information Network (ZFIN), I was responsible for the development of data standards and tools in support of the zebrafish as a model system. As nomenclature coordinator, I named genes and organisms and coordinated naming and orthology links with governing bodies of nomenclature for other model organisms and humans. At ZFIN I was also in charge of anatomical and phenotype ontologies for indexing gene expression

# Citing products of your research

Credit and expertise are represented by  
the things that are connected to you

**Science Experts Network Curriculum Vitae**

**Finally: Federal biosketch  
allows inclusion of non-  
traditional scholarly products**

## Getting a DOI for a dataset or code or other kinds of documents
