# Informatics Research Workforce I – Training for Future Informatics Workforce Needs

William Hersh, MD
Professor and Chair
Department of Medical Informatics & Clinical Epidemiology
School of Medicine
Oregon Health & Science University

Blog: <a href="http://informaticsprofessor.blogspot.com">http://informaticsprofessor.blogspot.com</a>

1

### Outline

- Known data about the quantity of professions needed as well as the skills and competencies required
- Recent federal programs that have attempted to expand that workforce, including from the Office of the National Coordinator for Health IT (ONC), the National Library of Medicine (NLM), and others

## Workforce needs – original motivations and questions

- As OHSU informatics program matured, and 10x10 was formed, wanted to know more about informatics workforce need
  - Extensive search for literature yielded little
- Thought process started with JAMIA (2006) paper, "Who are the Informaticians?"
  - Noted growing role for those who worked "professionally" in informatics

## What did data from circa 2006-2007 show?

Group	Quantitative	Qualitative
IT	US and UK: ~1 FTE per 50-60 non-IT FTE <sup>1,2,3</sup>	Knowledge of health care deemed essential <sup>4</sup>
HIM	~170,000 now, increasing to ~200,000 by 2016 <sup>5</sup>	Evolving role as technology changes <sup>6</sup>
Informatics	Unknown; minimum estimates of ~12,000 clinical (one MD and nurse per hospital) <sup>7</sup> and ~1,000 public health <sup>8</sup>	CMIO is example of a new position and is evolving <sup>9,10</sup>

<sup>&</sup>lt;sup>1</sup>Gabler, 2003; <sup>2</sup>Eardley, 2006; <sup>3</sup>Hersh, 2008; <sup>4</sup>Monegain, 2004; <sup>5</sup>Dohm, 2007; <sup>6</sup>AHIMA, 2003, <sup>7</sup>Safran, 2005; <sup>8</sup>Friedman, 2007; <sup>9</sup>Leviss, 2006; <sup>10</sup>Shaffer, 2007

4

## In 2008, found a data source for possible answers

- HIMSS Analytics Database
  - Self-reported data from about 5,000 US hospitals, including IT FTE
  - EMR Adoption Model
- IT FTE per bed <0.1 for stages 1-2, rising to ~0.2 for stages 4-6
- Extrapolating to all of US
  - 108,390 IT staff at current adoption at present
  - Would increase to 149,174 if all stages <4 hospitals moved to stage 4
    - Need for >40,000 more!

Stage 7	Medical record fully electronic; CDO able to contribute to EHR as byproduct of EMR	
Stage 6	Physician documentation (structured templates), full CDSS (variance & compliance), full R-PACS	
Stage 5	Closed loop medication administration	
Stage 4	CPOE, CDSS (clinical protocols)	
Stage 3	Clinical documentation (flow sheets), CDSS (error checking), PACS available outside Radiology	
Stage 2	CDR, CMV, CDSS inference engine, may have Document Imaging	
Stage 1	Ancillaries – Lab, Rad, Pharmacy – All Installed	
Stage 0	All Three Ancillaries Not Installed	

## Among the things that led to

"SEC. 3016. INFORMATION TECHNOLOGY PROFESSIONALS IN HEALTH CARE.

"(a) In General.—The Secretary, in consultation with the Director of the National Science Foundation, shall provide assistance to institutions of higher education (or consortia thereof) to establish or expand medical health informatics education programs, including certification, undergraduate, and masters degree programs, for both health care and information technology students to ensure the rapid and effective utilization and development of health information technologies (in the United States health care infrastructure).

"(b) Activities.--Activities for which assistance may be provided under subsection (a) may include the following:

- "(1) Developing and revising curricula in medical health informatics and related disciplines.
- "(2) Recruiting and retaining students to the program involved.
- "(3) Acquiring equipment necessary for student instruction in these programs, including the installation of testbed networks for student use.
- "(4) Establishing or enhancing bridge programs in the health informatics fields between community colleges and universities.
- "(c) Priority.--In providing assistance under subsection (a), the Secretary shall give preference to the following:
  - "(1) Existing education and training programs.
  - "(2) Programs designed to be completed in less than six months.

## Which led to ONC Workforce **Development Program**

Investment of \$118M based on estimated need for 51,000 health IT professionals in 12 workforce roles (Hersh, 2012)

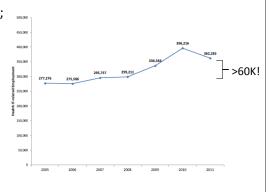

- funded with emphasis on short-term training using distance learning
- OHSU funded to enroll trainees in existing programs

- Five universities funded to develop curricula for community college programs
- OHSU funded to develop curricula and to serve as National Training & **Dissemination Center** (NTDC)
- Materials available at www.onc-ntdc.info

### **HITECH** outcomes

\$6M

- Job growth under-predicted; actual numbers hired have been even higher (Furukawa, 2012; Schwartz, 2013)
- Despite growth of jobs and number trained, shortfalls persist that undermine success of IT projects, including achievement of meaningful use (CHIME, 2012; HIMSS Analytics, 2013; Towers-Watson, 2013)

## What are the competencies required of groups of the workforce?

Organization or Journal [Reference]	Year	Discipline	Title
Nursing Clinics of North America [68]	2008	Nursing	Technology and informatics competencies
AMIA-OHSU 10x10 Course [69]	2009	Informatics	AMIA-OHSU 10x10 Program - Detailed Curriculum, Learning Objectives
AMIA Core Content for Clinical Informatics [35]	2009	Informatics	Core content for certification of physicians (with others to follow later)
TIGER Nursing Informatics [70]	2009	Nursing In- formatics	TIGER Informatics Competencies Collaborative (TICC) Final Report
Office of the National Coordinator for Health IT [71]	2009	Electronic health record adoption	HIT Workforce Competencies by Role
Centers for Disease Control and Prevention, [72]	2009	Informatics	Public Health Informatics Competencies
International Medical Informatics Association [73]	2010	Informatics	Recommendations of the International Medical Infor- matics Association (IMIA) on education in biomedical and health informatics

#### More recently:

- Clinical informatics core content (Gardner, 2009)
- Clinical informatics fellowship (Safran,
- Transitions, e.g., from implementation to analytics (Hersh, 2012)

#### Core content for clinical informatics (Gardner, 2009)

#### Fundamentals 1. Clinical Informatics

- 1.1. Clinical informatics
  1.1.1. The discipline of informatics
  1.1.2. Key informatics concepts, models, theories
  1.1.3. Clinical informatics literature
  1.1.4. International clinical informatics practices
  1.1.5. Ethics and professionalism

- 1.1.6. Legal and regulatory issues
  1.2. The Health System
  1.2. The Health System
  1.2.1. Determinants of individual and population health
  1.2.2. Primary domains, organizational structures,
  cultures and processes cultures, and processes
- cultures, and processes
  1.2.3. The flow of data, information, and knowledge
  within the health system
  1.2.4. Policy & regulatory framework
  1.2.5. Health economics and financing
  1.2.5. Froces shaping health care delivery
  1.2.7. Institute of Medicine quality components

### Clinical Decision Making and Care Process Improvement Clinical Decision Support

- 2.1. Clinical Decision Support
  2.1.1. The nature and cognitive aspects of human decision making
  2.1.2. Decision science
  2.1.3. Application of clinical decision support
  2.1.4. Transformation of knowledge into clinical decision current testics.

- 2.1.4. Irransormation of incoverage into caninata decision support tools 2.1.5. Legal, ethical, and regulatory issues 2.1.6. Quality and safety issues 2.1.7. Supporting decisions for populations of patients 2.2. Evidence-based Patient Care 2.2.1. Evidence sources 2.2.1. Evidence grading 2.2.3. Clinical guidelines are clinical shortbase.

- 2.2.3. Imilical guidenimes
  2.2.4. Implementation of guidelines as clinical algorithms
  2.2.5. Information retrieval and analysis
  2.3. Clinical Workflow Analysis, Process Redesign, and
  Quality Improvement
  2.3.1. Methods of workflow analysis
- 2.3.2. Principles of workflow re-engineering 2.3.3. Quality improvement principles and practices

- 3. Health Information Systems
  3.1. Information Technology Systems
  3.1.1. Computer Systems
  3.1.2. Architecture
  3.1.3. Networks
  3.1.4. Security
  3.1.5. Data
  3.1.6. Technical approaches that enals
  3.1.6. Technical approaches

- 3.1.6. Technical approaches that enable sharing data 3.2. Human Factors Engineering 3.2.1. Models, theories, and practices of human-computer (machine) interaction (HCI)
- 3.2.2. HCI Evaluation, usability testing, study design and
- methods
  3.2.3. Interface design standards and design principles
  3.2.4. Usability engineering
  3.3. Health Information Systems and Applications
  3.3.1. Types of functions offered by systems

- 3.3. Types of functions offered by systems are used
  3.2.2 Types of trunctions offered by systems
  3.2.2 Types of settings where systems are used
  3.3.2 Electron health/medical records systems as the foundational tool
  3.4. Telemedicine
  3.4. Climical Data Standards
  3.4.1 Standards development history and current process
  3.4.2 Data standards and data sharing
  3.4.3 Transaction standards
  3.4.4. Messaging standards
  3.4.4. Messaging standards
  3.4.5 Nomenciatures, vocabularies, and terminologies
  3.4.6. Transaction standards
  3.5. Initiational governance of clinical information systems
  3.5.2 Clinical information needs analysis and system selection
  3.5.4. Clinical information system insplementation
  3.5.4. Clinical information system insplementation

- 4. Leading and Managing Change
  4.1 Leadership Models, Processes, and Practices
  4.1.1 Dimensions of effective leadership
  4.1.2 Governance
  4.1.3 Negotiannangement
  4.1.4 Conflict management
  4.1.5 Collaboration

- 4.1.5. Collaboration
  4.1.6. Molivation
  4.1.7. Decision making
  4.1.7. Decision making
  4.2. Effective Interdisciplinary Teams
  4.2.1. Human resources management
  4.2.1. Fluman resources management
  4.2.2. Team productivity and effectiveness
  4.2.3. Group management processes
  4.2.3. Group management processes
  4.2.4. Managing meetings
  4.2.5. Managing group deliberations
  4.3.1. Effective presentations to group
  4.3.1. Effective presentations to group
  4.3.1. Effective presentations to group

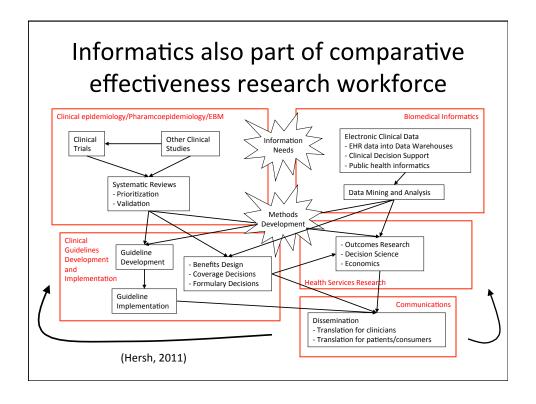

- 4.3 Effective Communications
  4.3.1. Effective presentations to groups
  4.3.2. Effective presentations to groups
  4.3.2. Effective presentations to groups
  4.3.3. Writing effectively for various audiences and goals
  4.3.4. Developing effective communications program to support system implementation
  4.4. Project Management
  4.4.1. Basic principles
  4.4.2. Identifying resources
  4.4.3. Resources
  4.4.3. Resources allocation
  4.4.4. Froject management tools (non-software specific)
  4.4.4.5. Informatics project challenges
  4.5. Strategic and Financial Planning for Clinical Information Systems
  4.5.1. Establishing mission and objectives
  4.5.2. Environmental scanning
  4.5.3. Strategy formulation
  4.5.4. Action planning and strategy implementation
  4.5.5. Action planning and strategy implementation
  4.5.6. Principles of managerial accounting
  4.5.7. Evaluation of planning process
  4.6.1. Assessment of organizational culture and behavior
  4.6.1. Assessment of organizational culture and behavior
  4.6.1. Strategies for promoting doption and effective use of clinical information systems.

4.6.4. Strategies for promoting adoption and effective use of clinical information systems

10

## More longstanding training in informatics has come from NLM

### **Conclusions**

- There has been substantial growth in job opportunities for biomedical informatics
- Growth larger in operational/professional roles but still strong for academic/research areas
  - Augmented by shift of focus to data
- Tempered by reductions in federal research funding, end of meaningful use incentives, and other changes in healthcare
