1

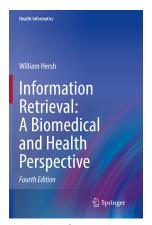

#### Overview

- Applying IR to the EHR
- Cohort discovery
- Challenges for EHR research
- · This work funded by grant from
  - NLM 1R01LM011934
- With help from OHSU collaborators
  - Steven Bedrick
  - Jolie Kaner

#### Information retrieval (IR, aka, search)

- We all do it Google, PubMed, etc.
- As academics, we evaluate it personal journey from
  - Knowledge-based information (1990, 1994, 1998)
  - Studies of users (mostly physicians) (1996, 2002)
  - Participation/leadership of challenge evaluations, mainly Text Retrieval Conference (TREC) (<a href="https://trec.nist.gov/">https://trec.nist.gov/</a>; 2009; Voorhees, 2012; Roberts, 2016; Roberts, 2021)

(Hersh, 2020)

3

3

## Applying IR to the EHR

- Increased availability of data with incentives for electronic health record (EHR) adoption in HITECH Act of 2009
- With availability of EHR data, first effort was cohort discovery task of TREC Medical Records Track (Voorhees, 2012; Voorhees, 2013)
- Awarding in 2014 of NIH R01 to (former) OHSU faculty Stephen Wu to explore methods in parallel with Mayo Clinic (Zhu, 2014; Wu, 2017; Wang, 2019; Chamberlin, 2020)

4

# IR system evaluation based on test collections of "documents"

- Recall  $R = \frac{\#retrieved\ and\ relevant\ documents}{\#relevant\ documents\ in\ collection}$
- Precision  $P = \frac{\# retrieved \ and \ relevant \ documents}{\# retrieved \ documents}$
- Aggregate measures
  - F combining and (optional) weighting of R and P
- Measures for ranked output (Harman, 2011)
  - Mean average precision (MAP) (Harman, 2005)
  - B-Pref used when relevance judgments incomplete (Buckley, 2004)
  - Others normalized distributed cumulative gain (NDCG), inferred measures (Jarvelin, 2002)

OHSII

5

# Electronic health record (EHR) structure Demographics Problem List Note Lab Result Hospital Encounter Surgery

#### Cohort discovery

- Widely offered service by most academic medical centers but little formal evaluation of approaches
- Early work TREC Medical Records Track, 2011-2012
- Follow-on collaboration funded by NLM R01

7

#### TREC Medical Records Track

- Appealing task given HITECH investment and EHR adoption
  - NIST involved in HITECH in various ways
- · More challenging with patient-specific data due to
  - Privacy issues
  - Task issues
- Facilitated with development of large-scale, de-identified data set from University of Pittsburgh Medical Center (UPMC)
- Launched in 2011, repeated in 2012

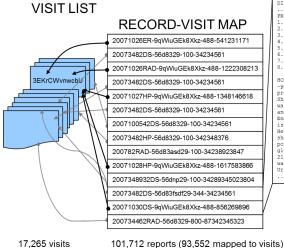

#### Test collection for EHR retrieval

- Task
  - Identify patients who are possible candidates for clinical studies/trials
- · "Documents"
  - At "visit" level due to de-identification of records
- "Topics"
  - Selected 35 clinical study topics from IOM key areas for comparative effectiveness research
- "Relevance judgments"
  - Patients "relevant" to topics, judged by OHSU informatics students who were also physicians

9

## Test collection structure

DISCHARGE SUMMARY

PRINCIPAL DIAGNOSES: RINCIPAL DIAGNOSES:
Urinary tract infection.
Gastroenteritis.
Dehydration.
Hyperglycemia.
Diabetes mellitus.
Osteoarthritis.
Western of pages in

No. Answery of Consider the Section 1. A \*\*AGE[in 40s]
--year-old insulin-dependent diabetic who
presented with nausea, vomiting, and diarrhea.

She was admitted, placed on IV fluids, a sliding scale,
was found to have evidence of urinary tract infection,
and treated with oral Bactrim. She was seen by
Endocrinology. She was started on Lantus, and overall
is feeling better. She is tolerating a regular diet.
Her sugars have been under better control, and
she is being discharged to home. Sodium was 13s, Her sugars have been under better control, and she is being discharged to home. Sodium was 135, potassium was 4.5, BUN was 21, creatinine was 0.9, and glucoses recently ranged from 80 to the highest of 219. Her sugars were as high as 300. Her white count was 7.5, hemoglobin was 11, and hematocrit was 33.0. Urinalysis was positive.

Report Extract

20071030DS-9qWiuGEk8Xkz-488-856269896

(Voorhees, 2013)

#### Some issues for test collection

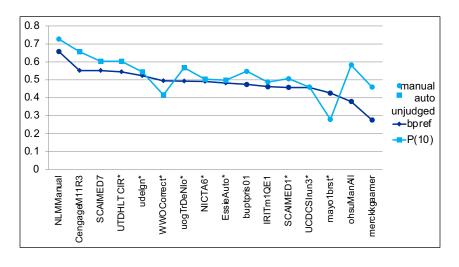

- De-identified to remove protected health information (PHI), e.g., age number → range
- De-identification precluded linkage of same patient across different visits (encounters)
- UPMC only authorized use for TREC 2011 and TREC 2012 but no longer available

OHSII

11

11

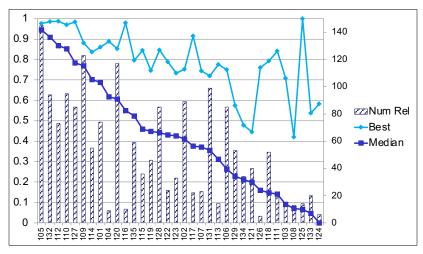

## Evaluation results for top runs – 2011

S S

12

# But as commonly seen in IR, wide variation across topics

OHSU

13

# "Easy" and "hard" topics

- · Easiest best median B-Pref
  - 105: Patients with dementia
  - 132: Patients admitted for surgery of the cervical spine for fusion or discectomy
- Hardest worst best B-Pref and worst median B-Pref
  - 108: Patients treated for vascular claudication surgically
  - 124: Patients who present to the hospital with episodes of acute loss of vision secondary to glaucoma
- · Large differences between best and median B-Pref
  - 125: Patients co-infected with Hepatitis C and HIV
  - 103: Hospitalized patients treated for methicillin-resistant Staphylococcus aureus (MRSA) endocarditis
  - 111: Patients with chronic back pain who receive an intraspinal pain-medicine pump

## Failure analysis for 2011 topics (Edinger, 2012)

	Number	Number
Reasons for Incorrect Retrieval	of Visits	of Topics
Visits Judged Not Relevant		
Topic terms mentioned as future possibility	16	9
Topic symptom/condition/procedure done in the past	22	9
All topic criteria present but not in the time/sequence specified by the topic description	19	6
Most, but not all, required topic criteria present	17	8
Topic terms denied or ruled out	19	10
Notes contain very similar term confused with topic term	13	11
Non-relevant reference in record to topic terms	37	18
Topic terms not present—unclear why record was ranked highly	14	8
Topic present—record is relevant—disagree with expert judgment	25	11
Visits Judged Relevant	•	•
Topic not present—record is not relevant—disagree with expert judgment	44	21
Topic present in record but overlooked in search	103	27
Visit notes used a synonym or lexical variant for topic terms	22	10
Topic terms not named in notes and must be inferred	3	2
Topic terms present in diagnosis list but not visit notes	5	5

#### What approaches did (and did not) work?

- Best results in 2011 and 2012 from NLM group (Demner-Fushman, 2011; Demner-Fushman, 2012)
  - Top results from manually constructed queries using Essie domain-specific search engine (Ide, 2007)
  - Other automated processes fared less well, e.g., creation of PICO frames, negation, term expansion, etc.
- Best automated results in 2011 obtained by Cengage (King, 2011)
  - Filtered by age, race, gender, admission status; terms expanded by UMLS Metathesaurus
- Approaches commonly successful in general IR provided small or inconsistent value for this task
  - Document focusing, term expansion, etc.

17

17

## Extending cohort discovery work

- Mayo Clinic-OHSU collaboration
  - Hongfang Liu, Mayo Clinic, Co-PI
  - Stephen Wu, OHSU, Co-PI
  - William Hersh, OHSU, Co-I
- Aimed to add natural language processing (NLP) and language modeling (LM) to base IR methods on large amounts of unmodified (not de-identified) text from EHR
  - Preliminary data showed improvement over baseline IR techniques with TREC Medical Record Track collection (Zhu, 2014)
- Methods (Wu, 2017) and results (Chamberlin, 2020)

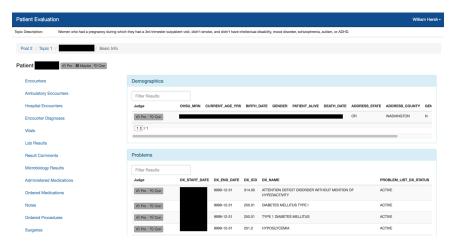

# Original EHR data – 100K OHSU patients having ≥3 visits

# Judgments from Patient Relevance Assessment Interface (PRAI)

OHSII

## Topic examples – summary and full

Adults with IBD who haven't had GI surgery	Adults with inflammatory bowel disease who haven't had surgery involving the small intestine, colon, rectum, or anus.
Adults with a Vitamin D lab result	Adults with a lab result for 25- hydroxy Vitamin D collected between May 15 and October 15.
Postherpetic neuralgia treated with topical and systemic medication	Adults with postherpetic neuralgia ever treated by concurrent use of topical and non-opioid systemic medications.
Children seen in ED with oral pain	Children who were seen in the emergency department with herpetic gingivostomatitis, herpangina or hand, foot, and mouth disease, tonsillitis, gingivitis, or ulceration (aphthae, stomatitis, or mucositis) not due to chemotherapy or radiation.
3 <sup>rd</sup> trimester prenatal visit with midwife or Ob/Gyn	Women who had a pregnancy with a 3 <sup>rd</sup> trimester outpatient prenatal visit with an obstetrician and gynecologist or midwife.

- A. Adults 18-64 years old with rheumatoid arthritis who have had a lab test for cyclic citrullinated peptide IgG antibody with a result greater than 40 units.
- B. Adults 18-64 years old with rheumatoid arthritis and lab result for positive anti-CCP IgG > 40 units.
  - l. A 58-year-old female presents with morning stiffness and joint pain in her hands, especially her fingers, which improves after about 30 minutes, but doesn't remit fully. On examination she is found to have ulnar deviation, decreased grip strength, and joint tenderness over the MCP and PIP joints. She has a positive rheumatoid factor and is positive for anti-CCP Ab at 45 units.
- C. Adults 18-64 years old with rheumatoid arthritis and lab result for positive anti-CCP IgG > 40 units.
  - Demographics inclusion
     a. Age: 18-64 years
  - II. Diagnosis inclusion
  - a. Rheumatoid arthritis (ICD-9): 714.0
  - III. Lab inclusion
    - a. Cyclic citrullinated peptide IgG antibody (anti-CCP IgG): > 40 units

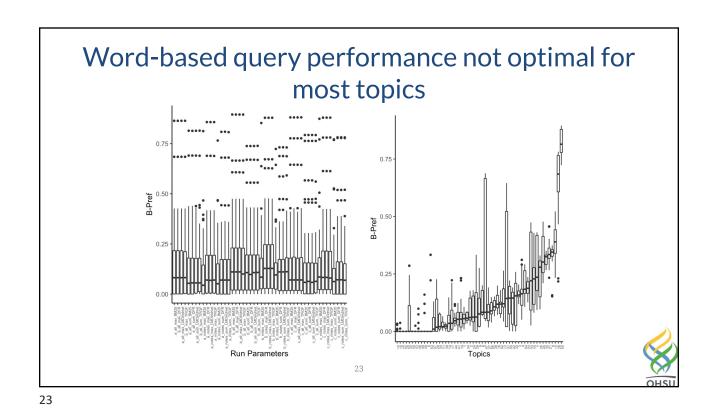

2.1

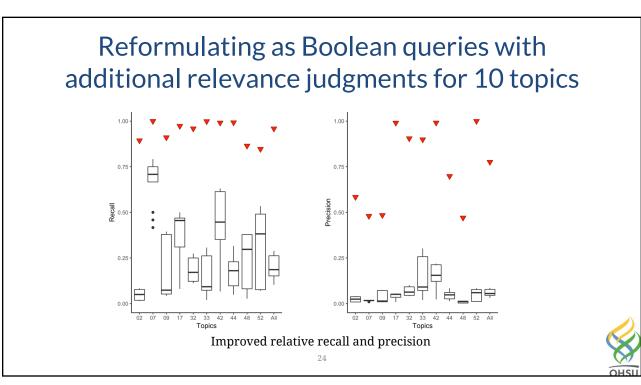

21

# Initial approach used word-based queries with varying parameters

- · Topic representation
  - A summary statement
  - B clinical case
  - C detailed criteria
- Text subset
  - Just text notes
  - All of record
- Relevance aggregation
  - Sum of all retrieved
  - Max retrieved
- Retrieval ranking
  - BM25 (Roberston, 1994)
  - DFR (Amati, 2002)
  - LMDir (Zhai, 2004)
  - Lucene aka, TFIDF (Salton, 1988)

#### **Continued work**

- For renewed R01
  - Added third site, University of Texas Health Science Center Houston
  - Updated OHSU EHR data to present with same 100K patients
- To facilitate comparative methods and results without sharing data, standardizing all data, code, and methods
  - Including new relevance judgment systems
- Adopting Observational Medical Outcomes Partnership (OMOP) format for data
  - Emerging standard for EHR data in research settings

25

25

## Challenges for EHR retrieval work

- · Need for large and realistic data sets
  - Scalability of methods
  - More generalizable to real world
- Big challenge is patient privacy
  - Data not readily sharable
  - Leading to concerns about reproducibility
- Can we solve privacy problems?
  - Exhaustive de-identification, including of notes is it possible?
  - Controlled access to identified data (Guerrero, 2019)
  - Evaluation as a service (Roegiest, 2016; Hopfgartner, 2018; Fröbe, 2023)

#### **Future directions**

- Continue to build out test collection across three sites
- Apply generative AI methods to improve retrieval methods with our collections (Kusa, 2023; Nievas, 2024; Wornow, 2024; Unlu, 2024)
- Add user interface to develop interactive use
